

Senturion™ Managed Referral Verification System (SM-RVS™)

Referral prescriptions can stretch scarce federal resources for your 340B program — let our Senturion team of experts help you capture them to expand your 340B benefit.

Don't let the complexities of managing referral provider relationships prevent you from realizing additional 340B benefit. Our Referral Verification System (RVS) leverages your existing Sentrex platform to access referrals initially deemed ineligible. And our Senturion RVS team of experts does the leg work for you — so you can stay focused on your overall 340B program success.

- ✓ **No setup or implementation fees**
- ✓ **Dedicated Senturion RVS experts to evaluate and track referral data**
- ✓ **No additional IT resources on your end**

Senturion Managed RVS Workflow

- 1 A patient has a qualifying health event and fills the prescription at one of your contract pharmacies.
- 2 Sentrex reviews the claim, and if it's ineligible based on RVS logic, it's placed in the SM-RVS queue.
- 3 Our Senturion RVS expert reviews the claim and confirms the provider-referral relationship. Documentation of the encounter is attached to the claim in Sentrex to demonstrate your ownership of the patient's health care journey.
- 4 Sentrex applies the relationship verification to all appropriate referral claim refills within the respective reprocessing window.

Senturion Managed RVS delivers more than just the basics of referral management

Policies and Procedures

We provide P&P template language for you to adequately define your referral relationships, including clear documentation that you'll continue to maintain the patient's care.

Targeting Strategies

We help you determine which claims to pursue based on contract pharmacy relationship, net claim opportunity or claim expiration date.
