

Optimize Data for Supply Charge Automation

60% of supply chain leaders say data and analytics are the highest priority areas for improvement in 2019¹

A recent case study on the operating room supply chain found that foundational data used in preference cards is inaccurate, charging has vague descriptions and lack of maintenance making it error prone, and billing is difficult because of missing item numbers and inaccurate pricing.²

To improve these underlying issues in the supply chain, especially with high-dollar OR devices and supplies, organizations must have a way to bridge the gaps between data silos and improve the master data accuracy of the item master, chargemaster, and OR files.

Trisus Supply is the solution that shows a consolidated view of the data between silos to help supply chain and revenue integrity leaders understand where breakdowns occur. Our solution helps establish a more efficient OR supply chain strategy based on accurate data, improving and sustaining revenue integrity.

Ownership of OR supply chain managed at departmental level has created silos.²

Trisus Supply maximizes supply charge automation

Focusing on the OR, Trisus Supply takes a new, innovative approach to supply charge automation. Using foundational data from your item master, OR file, and chargemaster we can identify gaps in data between the systems. Another layer of data applied comes from our Supplies Assistant database, providing valuable HCPCS coding and description information for costly devices and implants.

Trisus Supply ensures cost to charge accuracy

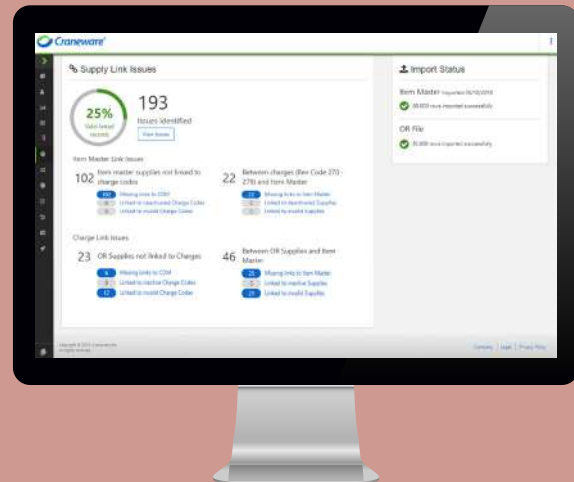

You want to ensure you are billing for every reimbursable device. Trisus Supply examines differences in costs across purchases, the item master, and OR file, while highlighting the charge in the chargemaster. You can easily identify where there are inaccuracies in cost that impact your pricing strategies.

Trisus Supply enhances compliance to improve claim accuracy

Trisus Supply can identify improper or missing HCPCS codes in the foundational data that is pushed to the claim. We also find issues where items are linked incorrectly between the item master, OR file, and chargemaster that need corrective action to ensure compliant patient billing. Ensuring data gaps are eliminated across your systems and coding information is correct provides a higher level of compliance, cleaner claims, and revenue integrity.

Quickly identify charge capture gaps with Trisus Supply's intuitive dashboard.

The Craneware Group (AIM: CRW.L) is the leader in automated value cycle solutions, collaborating with US healthcare providers to plan, execute and monitor operational, financial and clinical performance so these leading organizations continue to drive better outcomes for the communities they serve. The Craneware Group's Trisus platform is an efficiency multiplier - automating quality audits, identifying waste, and streamlining administrative workflows. Our value cycle management suite includes charge capture, strategic pricing, 340B management, claims analytics, patient engagement, revenue recovery and retention, and cost and margin intelligence solutions.
